

SIMple – An innovative app making site management simple and sustainable

Drainage Services Department, The Government of HKSAR
Black and Veatch Hong Kong Ltd.
Build King - Kum Shing Joint Venture
Cerebro Strategy Ltd.

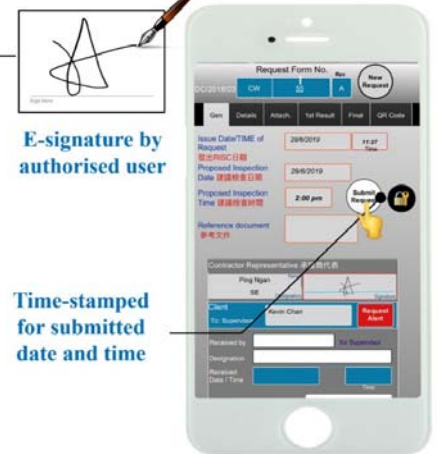

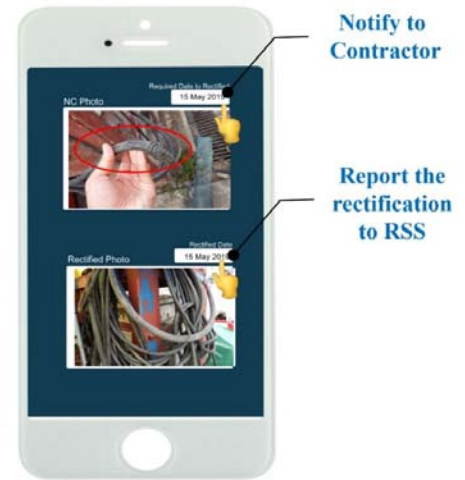

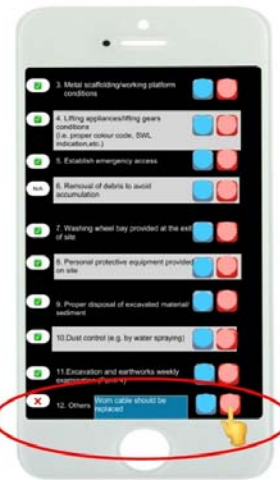

Site records keeping in the construction industry has always been on a different priority level compared to other site activities such as safety and progress. The methodology of record keeping is still on forms and checklists at best.

The Project Team collaboratively came up with the idea of developing a tailor-made site management app – **SIMple** to digitalise the 3 major aspects of site management including: -

- (i) **S**ite Diary;
- (ii) **I**nspection Checklist.
- (iii) **M**anagement Records for acceptance of Request for Inspection / Survey Check (RISC) form.

SIMple is a custom-built app with numerous advantages including user-friendly interfaces and efficiency button features that can help the staff easily capture, consolidate and share performance-related data and project images. Its common platform streamlines conventional processes, strengthens site records keeping, shortens the circulation process, and delivers notifications in real time. All these will lead to efficient work processes, and achieve better quality of work and overall project performance.

SIMple is a new way for daily site management and records keeping in construction sites. It is our ultimate goal to collect and analyse the data captured from different projects with a view to benchmarking and improving the project performance in a sustainable manner.
